

**AjourObjects**

*Ajour*

## **AEC businesses are challenged**

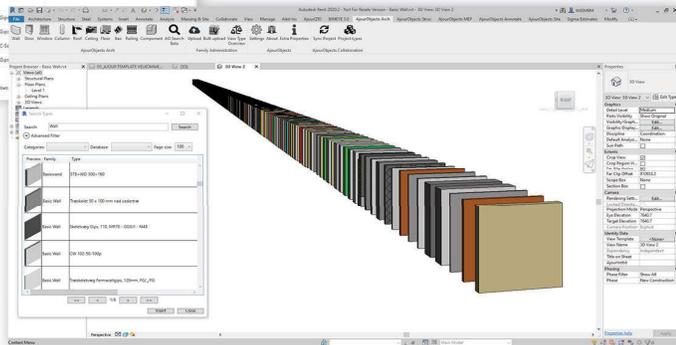

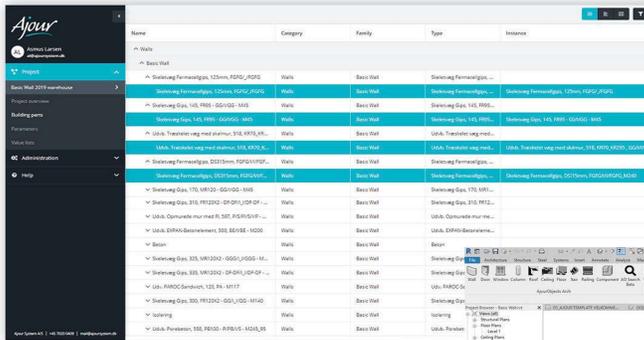

As the build environment needs to comply with an increased demand from legislation and sustainability requirements the importance of understanding, managing and structuring your company assets/BIM content is critical.

## Looking for the right objects for your product?

The building part is at the centre of AjourObjects and data is added or maintained centrally by the administrator. Subsequently it is easy to collect and re-use objects and central building part information project by project.

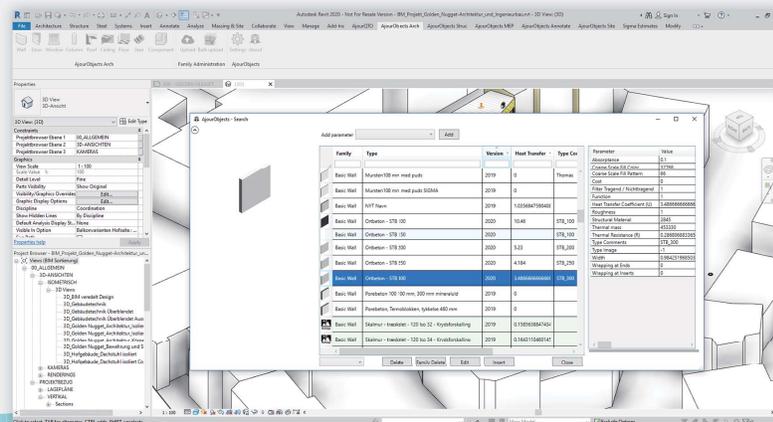

In AjourObjects you connect, re-use and search for all building part information accessible, e.g. U-value, price, fire properties or something quite different. Whether data derives from the manufacturer, the price book or your own library, it is integrated in the system.

A synergy between the manufacturers and designers emerges that takes the design process to a new level. Moreover, AjourSystem also offers the manufacturers the distribution of their objects through the platform.

## Increases the efficiency project by project

We really appreciate re-use! We know that making (and searching for), new BIM-objects, enriching objects with relevant data and finding relevant objects, when they are needed, is hard work. AjourObjects makes sure that by using the clever search function you will always be able to find your objects and use them repeatedly.

With AjourObjects' clever "insert" and "upload" functions there is no reason for filling the models with unnecessary objects. Always find the relevant building parts when they are needed. Upload objects for which you spent time creating and that your colleagues will be glad to have in their future projects.

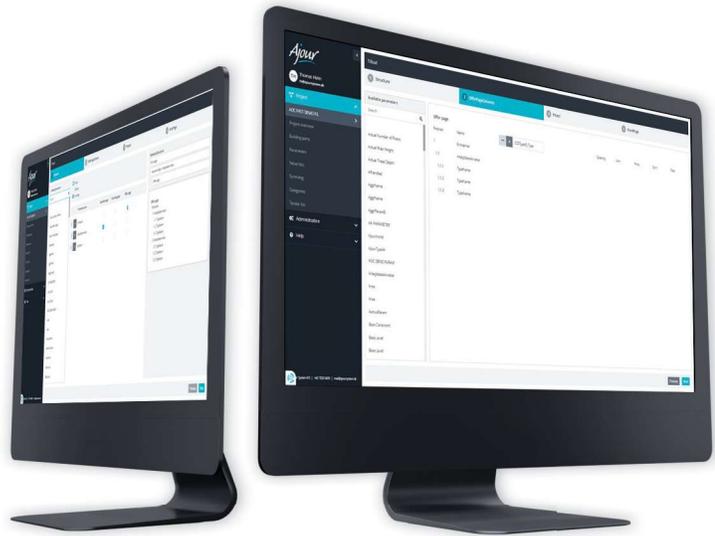

## State-of-the-art data hygiene

With AjourObjects you will easily capture all of your Revit BIM-content into one platform and via the AjourRevit plugin distribute it to your entire user base in your design organisation. You save time managing content, distributing the content and finding the right content as well as increase quality massively.

With AjourObjects you will get on-top of the task of managing valuable company assets.

- Manage your company's Revit Content
- Easily upload, manage and quality assure your content
- Secure your organisation from providing incorrect project information
- Future-proof Revit content with automatic updates between Revit versions
- Improve overall business value via BI dashboard

## Safeguard your digital assets and BIM content

An important part of AEC businesses is safeguarding your digital assets. AjourObjects' whitelist function provide you with a compelling way to manage your project specific BIM content with access and usage permissions.

Get a piece of mind and know that your users only see assets relevant to them and the project. Eliminate the risk of unapproved content being used
